About USRowing

USRowing is a nonprofit membership organization recognized by the United States Olympic Committee as the national governing body for the sport of rowing in the United States. USRowing selects, trains and manages the teams that represent the U.S. in international competition, including the world championships, Pan American Games and Olympics.

More than 14,000 individuals and 1,100 organizations strong, USRowing serves and promotes the sport on all levels of competition. USRowing membership reflects the spectrum of American rowers – juniors, collegians, masters and those who row for recreation, competition or fitness.

In 1982, the United States Rowing Association was formed by the merger of the National Association of Amateur Oarsmen, founded in 1872, and the National Women's Rowing Association, established in the early 1960s. USRowing brought these two organizations together with a name incorporating both men and women and reflecting the broader interests of rowing. In 1985, the organization moved from Philadelphia to Indianapolis, home of several other Olympic sport governing bodies; and in 1994, Indianapolis became the only U.S. city to host a world rowing championship. In February 2006, USRowing moved its corporate headquarters to Princeton, N.J., home of USRowing's national training center.

USRowing registers hundreds of regattas across the country each year, ensuring they are run under specific safety guidelines. The association also provides programs to educate referees and coaches. USRowing stages four national championship regattas annually: the USRowing National Championships, USRowing Club National Championships, USRowing Masters National Championships and the USRowing Youth National Championships. USRowing also conducts regional championships and national team selection events.

USRowing is a member of the United States Olympic Committee and Federation Internationale des Societes D'Aviron (FISA), the international rowing federation.

National Training Centers

USRowing has one primary National Training Center in Princeton, N.J., where the national team coaches are based. The center attracts top rowers from throughout the country and operates on a year-round basis. USRowing also uses the California Rowing Club and the Olympic Training Center in Chula Vista, Calif. as warm-weather training sites during the winter months.

The USRowing Training Center in Princeton, N.J. is USRowing's primary training facility. Located at Mercer Lake's Finn M.W. Caspersen Rowing Center and Princeton University's Shea Boathouse, rowers from throughout the country train year-round at Mercer County Park in West Windsor and at Princeton's Carnegie Lake.

Corporate Sponsors

Boathouse Sports

Founded in 1989 by two-time Olympic rower John Strotbeck, Boathouse Sports creates custom team athletic apparel for elite athletes. Based in the city of Philadelphia since its inception, where it manufactures over 95 percent of its products, Boathouse has earned an exclusive customer base of schools, universities and teams. Boathouse Sports continues to expand its reach as one of the fastest growing custom athletic apparel brands in the world. For more information, log onto www.Boathouse.com.

On May 14, 2009, Boathouse Sports became the exclusive athletic apparel supplier for the U.S. Senior and Under 23 National Teams, as well as the USRowing Training Center, effective immediately. Boathouse will work with USRowing and its athletes to develop a new unisuit specifically for the national team. Beginning October 1, 2009, Boathouse Sports will become the exclusive online and event merchandising partner of USRowing.

Hudson Boat Works

The London, Ontario-based boat manufacturer built its first boat in 1981. Since then, athletes have garnered 51 world and Olympic medals rowing Hudson boats, with seven medals coming at the most recent world championships. Many will recall the thrill of watching the U.S. men's eight set a world's fastest time in the heat at the Olympics en route to the first gold in that event in 40 years. The U.S. rowed the same boat to gold again at the 2005 World Championships.

Concept 2

Concept 2, an ergometer and oar manufacturer based in Morrisville, Vt., provides essential equipment to the national teams including indoor rowing machines (ergometers) and both sweep and sculling oars.

Nielsen-Kellerman

Nielsen-Kellerman, the leading manufacturer of electronic equipment for the sport of rowing, provides equipment for the USRowing National Team. Based in Chester, Pa., Nielsen-Kellerman makes such products as the StrokeCoach, which is a timer/rowing rate meter, and the Cox-Box, the coxswain's timer/amplifier system.

Powerhouse Timing

Powerhouse Timing, the Official Timing Provider of The Head of the Charles(r), was founded in 2002 to provide professional timing software and services. The company is the industry's leading innovator of software and technology to make rowing regattas easier to operate and results more accurate. Powerhouse Timing's premier services assure a higher standard of race management.

2009 World Championships Outlook

Twenty-four crews will represent the United States at the 2009 World Rowing Championships scheduled for August 23-30 in Poznan, Poland.

The United States will have crews competing in the men's single sculls, women's single sculls, lightweight men's single sculls, lightweight women's single sculls, men's double sculls, women's double sculls, lightweight men's double sculls, lightweight women's double sculls, men's quadruple sculls, women's quadruple sculls, lightweight men's quadruple sculls, lightweight women's quadruple sculls, men's pair, women's pair, men's pair with coxswain, lightweight men's pair, men's four, women's four, lightweight men's four, men's eight, women's eight, lightweight men's eight, adaptive men's single sculls and adaptive four with coxswain.

The 80-person roster includes 66 past national team members. Twenty athletes return from last year's squad that competed at the 2008 Olympic Games in Beijing, China. The United States won three medals in Beijing including gold in the women's eight, silver in the women's single sculls and bronze in the men's eight.

In addition, nine athletes return to the roster from last year's squad that competed at the 2008 World Rowing Senior and Junior Championships where the U.S. won gold in the lightweight men's eight, silver in the women's four and bronze in the lightweight women's quadruple sculls.

The women's eight is back to defend its title in Poland. The boat of coxswain **Katelin Snyder, Caroline Lind, Susan Francia, Anna Goodale, Lindsay Shoop, Kady Glessner, Laura Larsen-Strecker, Erin Cafaro** and **Mara Allen** includes five returning members of the 2008 Olympic eight in Lind, Francia, Goodale, Shoop and Cafaro and three members of the women's eight that won gold at the 2008 World Rowing Under 23 Championships. The U.S. took silver behind Romania at the world cup in Lucerne and as always, the Romanians will prove to be a tough challenge in Poznan. The Netherlands (last year's silver medalists) has shown speed this year with a bronze-medal finish in Lucerne.

Cafaro and Francia also will race in the women's pair. The duo finished fifth at the 2009 Rowing World Cup in Lucerne and will be looking for a spot on the podium.

The women's double sculls tandem of **Ellen Tomek** and **Megan Kalmoe** won gold at the world cup race in Lucerne, with a 0.91-second victory over Poland. The duo returns after a fifth-place finish in the event at the 2008 Olympic Games.

Competing in the men's eight is coxswain **Ned DelGuercio, Grant James, Ross James, Tyler Winklevoss, Jake Cornelius, Steve Kasprzyk, Alex Osborne, Mike Holbrook** and **Beau Hoopman**. A two-time Olympian in the men's eight, Hoopman won bronze in Beijing and gold at the 2004 Olympic Games in Athens. Winklevoss was a member of the men's pair that finished sixth at the 2008 Olympic Games, while James, James and Osborne were members of the under 23 national team in 2008. In addition, DelGuercio coxed the lightweight men's eight to a gold medal at the 2008 World Rowing Senior and Junior Championships.

The entire men's four is made up of 2008 Olympians. **Brett Newlin** and **Giuseppe Lanzone** return from the lineup that finished ninth in Beijing, while **Steve Coppola** was a member of the men's eight and **Cameron Winklevoss** competed in the men's pair.

The men's pair of **Charlie Cole** and **David Banks** will test its speed once again on the international stage after taking home the bronze medal from the world cup in Lucerne. Banks was a member of the men's four in Beijing, while Cole won bronze in last year's under 23 men's eight.

The women's four lineup of **Elle Logan**, **Jamie Redman, Amanda Polk** and **Esther Lofgren** will compete in Poznan. Logan was a Beijing gold-medalist in the women's eight, while Redman and Polk won gold in the 2008 under 23 women's eight and Lofgren won silver in the event at the 2008 World Rowing Senior and junior Championships.

Margot Shumway will race in the women's single sculls. Shumway, the stroke of the Beijing women's quadruple sculls that finished fifth at the 2008 Olympic Games, returns solo to test her speed against the world's fastest female scullers.

In the men's single sculls, 2008 Olympic alternate **Warren Anderson** posted a pair of ninth-place finishes at the world cups in Banyoles and Munich.

In the lightweight men's four, **Will Daly, Brian de Regt, Nick LaCava** and **Taylor Washburn** will compete. Daly returns from the 2008 Olympic boat that finished 11th, while de Regt, LaCava and Washburn are first-time senior national team members. Daly also won gold in the lightweight eight at the 2008 World Rowing Junior and Senior Championships.

Glenn Ochal, **Will Miller, Sam Stitt** and **Elliot Hovey** will compete in the men's quadruple sculls. Stitt raced in the boat at the 2008 Olympic Games, while Hovey was a member of the men's double sculls in Beijing.

Kate Bertko, Sarah Trowbridge, Stesha Carle and **Megan Walsh** will race in the women's quadruple sculls. Carle and Trowbridge won silver in the four at the 2008 World Rowing Senior and Junior Championships.

In the men's pair with coxswain, the crew of coxswain **Marcus McElhenney**, **Henrik Rummel** and **Troy Kepper** are scheduled to compete. McElhenney coxed the men's eight to bronze in Beijing, while Rummel was a member of the 2008 bronze-medal under 23 men's eight and Kepper won silver in the men's four with coxswain at the 2005 World Rowing Championships.

In the men's double sculls, the duo of **Thomas Graves** and **Peter Graves** will make its senior national team debut. The Graves' finished second at last year's U.S. Olympic Trials and will be looking forward to testing their speed.

Cody Lowry is back to compete in the men's lightweight single sculls. Lowry is a four-time senior national team member. He finished sixth in the lightweight quadruple sculls event at the 2007 World Rowing Championships. In the lightweight women's single sculls, **Meghan Sarbanis** is scheduled to compete.

In the men's lightweight quadruple sculls, look for the crew of **Sam Cunningham**, **Dan Scholtz, Jon Winter** and **Brian Tryon**. Cunningham was a member of last year's under 23 national team, while Winter won silver in the event at the 2006 World Rowing Under 23 Championships.

In the women's lightweight quadruple sculls, **Abby Broughton, Stefanie Sydlik, Lindsey Hochman** and **Hillary Saeger** will compete. Three members of the boat are making their national team debut, while Broughton has raced in the event at the senior national team level.

John Wainwright and **Alex Rothmeier** will race in the lightweight men's pair. Wainwright stroked the lightweight men's four at the 2008 World Rowing Under 23 Championships, while Rothmeier raced in the event at last year's world championships.

In the lightweight men's double sculls, the familiar duo of **Andy Quinn** and **Shane Madden** return from last year's world championship aquad. Quinn and Madden finished 10th in the lightweight men's quadruple sculls at the 2008 World Rowing Senior and Junior Championships.

The women's lightweight double sculls combination of **Michelle Trannel** and **Kristin Hedstrom** finished seventh in the event at the world cup in Lucerne. Trannel raced in the women's quadruple sculls at the 2006 World Rowing Championships, while Hedstrom is a two-time under-23 national team member.

The lightweight men's eight crew is looking to defend its world-championship title. The lineup of coxswain **Kerry Quinn, Jimmy Sopko, Andrew Diebold, Matt Muffelman, Ryan Fox**, **Kenny McMahon, Anthony Fahden, Matt Kochem** and **Skip Dise** will compete in the event. Muffelman returns as the lone member of last year's lineup.

In the adaptive men's single sculls, Paralympian **Ron Harvey** returns after finishing fifth in the event at the 2008 Paralympic Games. In addition, the adaptive mixed four of coxswain **Tim Edsell, Eric McDaniel, Andrew Johnson, Emma Preuschl** and **Jen Klapper** will compete. Preuschl returns from last year's boat that won silver in Beijing, while Klapper brings four years of senior national team experience to the lineup.

Progression System

The Route to the Finals

Rowing competitions are 2,000 meters or approximately 1.25 miles. Competitions utilize a double-elimination system, which means each participant gets at least two opportunities to advance beyond the initial round. The double-elimination system makes it possible for the most competitive boats to advance, even if the top individuals or crews are in the same heat.

Every race consists of no more than six boats. Competitions begin with heats. Depending on the number of entries, a prescribed number of boats (see chart below) from each heat will advance to either a semifinal or directly to the finals. The remaining boats go to a repechage, or second-chance race. Again, a predetermined number of boats will advance from the repechage to either the semifinals or finals.

At the Olympic Games and world championships, every place in every event is determined. In other words, if there are 24 entries in an event, some crew will finish in 24th place. The “Final” determines places 1-6. The “Petite” or “B” final determines places 7-12 and so on.

The FISA Progression System: The Route to the Finals

(races have no more than six boats; all finals have six boats)

Number of Entries	Heats	Repechages	Semifinals
7-8	2 winners of each race to final; rest to repechage	1 top four to final	None
9-12	2 winners of each race to final; rest to repechage	2 top two from each race to final	None
13-15	3 top three per heat to semifinals; rest to repechage	1 top three to semifinals	2 top three per race to final; remainder to placing final
16-18	3 heat winners to semifinals; rest to repechage	3 top three from each race to semifinals	2 top three per race to final; remainder to placing final
19-24	4 heat winners to semifinals; rest to repechage	4 top two from each race to semifinals	2 top three per race to final; remainder to placing final

Reading the Results Sheet

On the **official results sheet**, crews are listed in the order they finish. The second column indicates the lane number. The three-letter code for the country is in the third column followed by the names of each athlete. The name at the top of the list is the bow, the person who will cross the finish line first.

The next four columns are for race times. The top line is the total elapsed time at each quarter of the race. Below the total elapsed time is the split for that 500 meters. The third line indicates the time lapse between this crew and the first crew to reach that mark.

In the upper right corner of the official results sheet, there are two large letter/number combinations. The top combination identifies the type of race -- a heat, a repechage, a semifinal or a final.

A bar across the page indicates which crews advance (those above the line).

At the bottom of the official results sheet is a small box with the progression and qualification spelled out. In the center of the page are the date and time of the race.

On the **FISA Web site (www.fisa.org)**, the first column lists the race number followed by the event category. In the next column, the two letter/number combination identifies the race. The next six columns indicate the place, country and final time.

Race Identification Codes include:

E = Elimination heats
R = Repechage
D = Semifinal
DC/D = Semifinals for places 13-18/19-24
FA = Final, results for places 1-6
FB = Petite Final, results for places 7-12
FC = Final results for places 13-18
FD = Final results for places 19-24

The Events

There are 14 events in the Olympic Games – eight for men and six for women. There are 22 events in the FISA World Championships – 13 for men and nine for women. Events are divided into two disciplines: **sweep rowing** and **sculling**, and two categories within those: **lightweight** and **open**.

Sculling and Sweep Rowing

Athletes with two oars – one in each hand – are *scullers*. There are three sculling events: the single – 1x (one person), the double – 2x (two) and the quad – 4x (four).

Athletes with only one oar are *sweep* rowers. Sweep boats may or may not carry a coxswain (pronounced cox-n) to steer and be the on-the-water coach. In boats without coxswains, one of the rowers steers by moving the rudder with his or her foot. Sweep rowers come in pairs with a coxswain (2+) and pairs without (2-), fours with a coxswain (4+) and fours without (4-) and the eight (8+), which always carries a coxswain. The eight is the fastest boat on the water. A world-level men's eight is capable of moving almost 14 miles per hour.

The pairs and fours with coxswain are sometimes the hardest to recognize because of where the coxswain is sitting. Although the coxswain is almost always facing the rowers in an eight, in pairs and fours the coxswain may be facing the rowers in the stern or looking down the course, lying down in the bow, where he or she is difficult to see.

Athletes are identified by their seat in the boat. The athlete in the bow is seat No. 1. That's the person who crosses the finish line first (which makes it easy to remember – first across the line is No. 1 seat). The person in front of the bow is No. 2, then No. 3, No. 4, No. 5, No. 6, No. 7 and No. 8 (known as the stroke). The stroke of the boat must be a strong rower with excellent technique, since the stroke sets the rhythm and number of strokes per minute the rest of the crew must follow.

Lightweight and Open Weight

An athlete of any weight can enter the open categories, although the average woman in an open race will approach 6' in height and an average open weight man 6'6". *Lightweight Men* cannot weigh more than 160 pounds and the average weight of the entire boat cannot exceed 155 pounds. *Lightweight Women* cannot weigh more than 130 pounds and the average weight of the entire boat cannot exceed 125 pounds.

Lightweights row the same events as open weight athletes, except that other than the men's lightweight eight, they do not carry coxswains, so there is no lightweight 2+ or 4+.

The Race

All events at the Olympic Games or FISA World Championships are 2,000 meters, or approximately 1.25 miles. The racecourse is divided into six lanes and each 500-meter section is marked with buoys.

The race begins with all boats aligned at the start in the lanes they've been assigned. Individuals in each lane hold the stern of each boat steady while an official, known as the aligner, ensures that each boat is even with the others and squarely facing the course.

Each crew is allowed one false start; two means disqualification. If within the first 100 meters there is legitimate equipment breakage (*e.g.*, an oar snaps in two), the race will be stopped and restarted with repaired equipment.

The *stroke rate* (the number of rowing strokes per minute that a crew is taking) is high at the start – maybe 45 to even 50 for an eight, 38 to 42 for a single scull. Then, the crew will "settle" into the body of the race and drop the rating back – 38 to 40 for an eight, 32 to 36 for a single. The coach and the way the race is going determine when the crew will sprint, but finishing stroke rates of 46+ in the last 200 meters aren't unheard of. However, higher stroke rates are not always indicative of speed. A strong, technically-talented crew may be able to cover more water faster than a less capable crew rowing a high stroke rate.

Unlike canoe/kayak competitions, rowers are allowed to leave their lanes without penalty, so long as they do not interfere with anyone else's opportunity to win. An official follows the crews to ensure safety and fairness.

Despite the exhaustion that follows each race, the crew will row for five to 10 minutes afterwards in order to cool down. In rowing, the medal ceremonies include the shells. The three medal-winning crews row to the awards dock, climb out of their shells and receive their medals before rowing away.

The Stroke

The whole body is involved in moving a shell through the water. Although rowing tends to look like an upper body sport, the strength of the rowing stroke comes from the legs.

The stroke is made up of four parts: *Catch, Drive, Finish and Recovery.* As the stroke begins, the rower is coiled forward on the sliding seat, with knees bent and arms outstretched. At the *catch*, the athlete drops the oarblade vertically into the water.

At the beginning of the *drive,* the body position doesn't change – all the work is done by the legs. As the upper body begins to uncoil, the arms begin their work, drawing the oarblades through the water. Continuing the drive, the rowers move their hands quickly into the body, which by this time is in a slight "layback" position, requiring strong abdominal muscles.

During the *finish,* the oar handle is moved down, drawing the oarblade out of the water. At the same time, the rower "feathers" the oar – turning the oar handle – so that the oarblade changes from a vertical position to a horizontal one. The oar remains out of the water as the rower begins *recovery,* moving the hands away from the body and past the knees. The body follows the hands and the sliding seat moves forward until, knees bent, the rower is ready for the next catch.

The Equipment

Oars

Oars move the boat through the water and act as balancers. Sweep oars are longer than sculling oars and may have wooden handles instead of rubber grips. The shaft of the oar is made of extremely lightweight carbon fiber instead of the heavier wood used years ago.

The popular "hatchet" blade – named because of its cleaver-like shape – is about 20 percent larger than previous blades. Its larger surface area has made it the almost-universal choice among world-level rowers.

The Boats – Sculls and Shells

All rowing boats can be called shells. Rowing boats with scullers in them (each person having two oars) are called sculls, *e.g. single scull, double scull, quadruple scull.* So, all sculls are shells but not vice versa. Originally made of wood, today's boats – especially those used in competition – are made of honeycombed carbon fiber. They are light and appear fragile but are crafted to be strong and stiff in the water.

The smallest boat – the single scull – is approximately 27 feet long and as narrow as 10 inches across. At 58 feet, the eight is the longest boat on the water.

The oars are attached to the boat with riggers, which provide a fulcrum for the levering action of rowing. Generally, sweep rowers sit in configurations that have the oars

alternating from side to side along the boat. But sometimes, most typically in the 4- or 4+, the coach will rig the boat so that two consecutive rowers have their oars on the same side in order to equalize individual athlete power.

Race Watching

The crew that's making it look easy is most likely the one doing the best job. While you're watching, look for ...

· Continuous, fluid motion of the rowers. The rowing motion shouldn't have a discernable end or beginning.

· Synchronization. Rowers strive for perfect synchronization in the boat.

· Clean catches of the oarblade. If you see a lot of splash, the oarblades aren't entering the water correctly. The catch should happen at the end of the recovery, when the hands are as far ahead of the rower as possible. Rowers who uncoil before they drop the oarblades are sacrificing speed and not getting a complete drive.

· Even oarblade feathering. When the blades are brought out of the water, they should all move horizontally close to the water and at the same height. It's not easy, especially if the water is rough.

· The most consistent speed. Shells don't move like a car – they're slowest at the catch, quickest at the release. The good crews time the catch at just the right moment to maintain the speed of the shell.

· Rowing looks graceful, elegant and sometimes effortless when it's done well. Don't be fooled. Rowers haven't been called the world's most physically-fit athletes for nothing. A 2,000-meter rowing race demands virtually everything a human being can physically bring to an athletic competition – aerobic ability, technical talent, exceptional mental discipline, ability to utilize oxygen efficiently and in huge amounts, balance, pain tolerance and the ability to continue to work when the body is demanding that you stop.

More race-watching tips -

· Race times can vary considerably depending upon the course and weather conditions. Tailwinds will improve times, while headwinds and crosswinds will hamper them.

· If a crew “catches a crab,” it means the oarblade has entered the water at an angle instead of perpendicularly. The oarblade gets caught under the surface and will slow or even stop a shell.

· A “Power 10” is a call by the coxswain for 10 of the crew’s best, most powerful strokes. Good coxswains read the course to know how many strokes remain for their crew to count down to the finish.

· Crews are identified by their oarblade design. The USA blades are red on top and blue on the bottom, with a white triangle at the tip.

· It doesn’t matter whether you win an Olympic medal or don’t make the finals, each crew still carries their boat back to the rack.

· Coxswains from first-place boats world-wide are thrown into the water by their crews. Coxswains don’t, and probably never did, yell “stroke! stroke!” Similar to a jockey, their job is to implement the coach’s strategy during the race, in addition to steering and letting the rowers know where they stand in the race and what they need to do to win.

Rowing Quick Facts

Rowing is one of the original sports in the modern Olympic Games.

Baron Pierre de Coubertin, founder of the modern Olympics, was a rower.

Rowers are the third largest U.S. delegation (48 athletes) to the Olympic Games.

Eight-oared shells are about 60-feet long -- that's 20 yards on a football field.

Rowing was the first intercollegiate sport contested in the United States. The first rowing race was between Harvard and Yale in 1852.

Physiologically, rowers are superb examples of physical conditioning. Cross-country skiers and long distance speed skaters are comparable in terms of the physical demands the sport places on the athletes.

An eight, which carries more than three-quarters of a ton (1,750 pounds), may weigh as little as 200 pounds. The boats are made of fiberglass composite material.

Singles may be as narrow as 10 inches across, weigh only 23 pounds, and stretch nearly 27-feet long.

The first amateur sport organization was a rowing club -- Philadelphia's Schuylkill Navy, founded in 1858.

From 1920 through 1956, the USA won the gold medal in the men's eight at every Olympic Games.

The first national governing body for a sport in the United States was for rowing. Founded as the National Association for Amateur Oarsmen in 1872, it was changed in 1982 to the United States Rowing Association.

Yale College founded the first collegiate boat club in the U.S. in 1843.

FISA, the first international sports federation, was founded in 1892.

Dr. Benjamin Spock, the famous doctor, was an Olympic rower in 1924 and won a gold medal in the eight. Gregory Peck rowed at the University of California in 1937.

Physiologists claim that rowing a 2,000-meter race – equivalent to 1.25 miles – is equal to playing back-to-back basketball games.

In 1999, the U.S. men's eight won its third consecutive gold medal at the world championships, a first in U.S. history.

At the 2004 Olympic Games, the U.S. men's eight won the gold medal. It marked the first time the U.S. had won the men's eight at the Olympics since 1964.

In 2007, the U.S. women's eight won its second consecutive world title at the 2007 FISA World Rowing Championships in Munich, Germany. It was the first time in history that the U.S. had won back-to-back world championships in the event.

In 2008, the U.S. women's eight won the gold medal. It was the first time the U.S. had won the women's eight at the Olympics since 1984.

Glossary of Rowing Terms

Bow: The forward section of the boat. The first part of the boat to cross the finish line. Also, the person in the seat closest to the bow, who crosses the finish line first.
Button: A wide collar on the oar that keeps it from slipping through the oarlock.
Coxswain: The person who steers the shell and is the on-the-water coach for the crew.
Deck: The part of the shell at the bow and stern that is covered with fiberglass cloth or a thin plastic.
Ergometer: Rowers call it an "erg." It's a rowing machine that closely approximates the actual rowing motion. The rowers' choice is the Concept2, which utilizes a flywheel and a digital readout so that the rower can measure his "strokes per minute" and the distance covered.
FISA: Short for Federation Internationale des Societes d'Aviron. The international governing body for the sport of rowing, established in 1892.
G*ate:* The bar across the oarlock that keeps the oar in place.
G*erman rigging:* A different way of setting up which side of the boat the oars are on in a sweep boat. Instead of alternating from side to side all the way from bow to stern, in a German rigged boat, two consecutive rowers have oars on the same side.
Lightweight: Refers to the rowers, not the boats; there is a maximum weight for each rower in a lightweight event as well as a boat average.
Oar: Used to drive the boat forward; rowers do not use paddles.
Port: The left side of the boat, while facing forward, in the direction of the movement.
Power 10: A call for rowers to do 10 of their best, most powerful strokes. It's a strategy used to pull ahead of a competitor.
Repechage: The second-chance race, which ensures that everyone has two chances to advance from preliminary races since there is no seeding in the heats.
Rigger: The triangular shaped metal device that is bolted onto the side of the boat and holds the oars.
Run: The run is the distance the shell moves during one stroke. You can figure it by looking for the distance between the puddles made by the same oar.
Sculls: One of the two disciplines of rowing -- the one where scullers use two oars or sculls.
Shell: Can be used interchangeably with boat.
Slide: The set of runners for the wheels of each seat in the boat.
Starboard: The right side of the boat, while facing forward, in the direction of movement.
Stern: The rear of the boat; the direction the rowers are facing.
Straight: Refers to a shell without a coxswain, i.e. a straight four or straight pair.

Stretcher or Footstretcher: Where the rower's feet go. The stretcher consists of two inclined footrests, which hold the rower's shoes. The rower's shoes are bolted into the footrests.

Stroke: The rower who sits closest to the stern. The stroke sets the rhythm for the boat; others behind him must follow his cadence.

StrokeCoach: A small electronic display that rowers attach in the boat to show the important race information like stroke rate and elapsed time.

Sweep: One of the two disciplines of rowing – the one where rowers use only one oar. Pairs (for two people), fours (for four people) and the eight are sweep boats. Pairs and fours may or may not have a coxswain. Eights always have a coxswain.

Swing: The hard-to-define feeling when near-perfect synchronization of motion occurs in the shell, enhancing the performance and speed.

Rowing Roots: A Brief History

Approximately 2,000 years ago, the Greeks figured out that an oar affixed to the side of a boat working against a fulcrum was more effective than a paddle. Back then, rowing wasn't a sport but a means of survival for the oarsmen who maneuvered large warships in battle.

Human nature being what it is, racing began as soon as there was more than one boat on the water. In America, boat racing began the same way in the middle 1800s – with challenges between watermen in New York harbor. Amateur rowing had been introduced during the first half of the century, and in 1852, the first intercollegiate competition ever held was a rowing race between Harvard and Yale.

The first amateur sports association was a rowing organization – Philadelphia's Schuylkill Navy, begun in 1858. Meanwhile, professional oarsmen were making a decent living rowing for money and astute gamblers earned a lot more. Amateur rowers, eager to distinguish themselves from the pros, established the National Association of Amateur Oarsmen in 1872. Now called USRowing, the NAAO was the first national governing body for sport in the United States.

By 1900, professional rowing's bad reputation of rigged races and sabotaged boats ended its popularity. But amateur rowing was flourishing and rowing was included in the first modern Olympic Games in 1896, although bad weather forced its cancellation.

Although women were rowing at the turn of the 20th century, the National Women's Rowing Association (NWRA) was not founded until the early 1960s. The Women's World Rowing Championships were first conducted in 1974 and women's events made their Olympic debut in Montreal in 1976. In 1982, the NAAO and NWRA united to form USRowing.
